COMPATIBLE  
Hematology Reagents

High Quality Compatible Reagents  
For High Value Results

## 40 years of existence and expertise in the development and the production of hematology compatible reagents

The beginning of the SFRI adventure as a pioneer in the manufacture of compatible hematology reagents began in 1977. 40 years later, SFRI has grown, changed and now offers a wide range of reagents as well as instruments. To achieve this, we have developed our own dedicated reagents and have especially expanded our range of «compatible» to more than 100 references!

SFRI compatible reagents have a priority: excellent correlation with «original» reagents. Because of this, we can simply tell you to replace the reagents made by ours.

Thanks to its large and modern facilities, SFRI can produce more than 80 tons per week with huge quantities per batch number.

Of course, SFRI is still developing new compatible reagents to complete its range and stay competitive in this market in constant evolution.

### Life cycle of a compatible reagent at SFRI

Very long shelf life of reagents

## SFRI, Reagents You Can Trust

### Quality, key success factor

Aware of the importance of the quality and confidence that ensues, SFRI has taken the pains to do everything to reassure its distributors as to the excellence of its products.

- SFRI obviously meets all the requirements of European standards;
- SFRI registers each of its reagents with the ANSM, the National Agency for the Safety of Medicines;
- SFRI has the ISO 13485 certification;
- All SFRI products are CE-marked.

### Quality product

SFRI quality control is more than just a formality. It is a guarantee of performance, reliability and success: know that the reagents that leave our factory pass a minimum of 3 quality controls before being launched in our different markets.

In addition, it is important to note that we validate the quality of our reagents on true pathological blood (fresh), ensuring precise results when necessary!

### By putting performance and quality first, we ensure that we:

- Deliver excellent products in the shortest delay possible;
- Continuously enhance the quality of our products and services;
- Meet clients' needs by offering a wider range of products.

### Reliable and Ready-to-use

There is nothing simpler than changing for SFRI compatible reagents. Obviously reliable and of quality, they are moreover supplied in packaging of pharmaceutical quality and especially in the bottles dedicated to the instruments. This does not involve any logistical changes and allows laboratories to keep their routine!

No technical modification of the instruments.

### Thoroughly Tested

All of SFRI reagents are thoroughly tested to ensure they meet product requirements. They have excellent correlation with original products. All reagent batches are tested to guarantee excellent quality of results, and suitability with hematology analyzers. SFRI is the only company to have performed quality control tests of all of its reagents on pathological blood, ensuring accurate results in every circumstance.

### Eco-friendly

SFRI is committed to leveraging sustainable development in all its practices. With this in mind, SFRI lysing reagents are mostly available as Cyanide free solutions, non-toxic for Man and the environment. They have the same long shelf life and are as stable after opening as traditional reagents. As we progressively renew our product lines, we ensure that all new reagent developments are geared towards eco-friendly non polluting solutions. We eco-conceive all new products.

## Compatible Hematology Reagents

Listed hereafter, in alphabetical order, the list of hematology compatible reagents SFRI offer.

### ABBOTT®
